VOCABULARY FROM MAGIC LANTERN SLIDES TO LINTERNAUTA APPLICATION

CARMEN LÓPEZ
FRANCISCO JAVIER FRUTOS

Universidad de Salamanca
Utrecht, 30 August 2017

INTRODUCTION

The research team from the University of Salamanca has contributed with two results of special relevance to the project *A Million Pictures*:

- **1)** The classification of magic lantern slides according to their **DISCURSIVE GENRE**
- **2)** Using this vocabulary Salamanca team have developed **LINTERNAUTA APPLICATION**

DISCURSIVE GENRE (IN THE CONTEXT OF THE MAGIC LANTERN)

The discursive genre is a complex concept with social and formal character in between 'Magic Lantern Slide' (evidence) and 'Magic Lantern Show' (reading context)

**Magic Lantern Slide
(Evidence)**

**Magic Lantern Show
(Reading Context)**

DISCURSIVE GENDER
Built
(Perform – Inspire - Inform)

THEORETICAL DEFINITION OF DISCURSIVE GENRE

(IN THE CONTEXT OF THE MAGIC LANTERN)

The assembly of relevant variables associated with the production, exhibition and reception conditions of graphically registered contents in magic lantern slides

1) The graphic PRODUCTION conditions set are composed by variables associated with the 'format', the 'graphic record' and 'graphic coding'

2) The scenic public EXHIBITION conditions set are composed by variables associated with 'commercial orientation of the device', 'social context' and 'scenic complexity'

3) The RECEPTION conditions of cultural contents set are composed by variables that connect the discursive genre of magic lantern slides with the great cultural traditions to transmit content: visual, musical, literary and scientific

CONTENT ANALYSIS AS A SCIENTIFIC METHOD TO ORGANIZE MAGIC LANTERN SLIDES

CODEBOOK

ANNEX III. CODEBOOK. EMPIRICAL STUDY

CONTENT ANALYSIS APPLIED TO THE TAXONOMIC ORGANIZATION OF THE MAGIC LANTERN SLIDES
A TYPOLOGY OF MAGIC LANTERN SLIDES DERIVED FROM THEIR GENRE

INTRODUCTION

A codebook serves as an instruction manual designed to fit each content analysis research. According Pitulni (2002, p. 21) a codebook can be defined as a sort of questionnaire which the analyst fills as if he were a pollster who asks himself and answers the answers depending on how each unit of analysis is read, heard or displayed. The codebook sets the magic lantern slide as the unit of analysis and aims to systematically collect information about the 'discourse genre' as a theoretical construct considering two kinds of observations: a direct one—made on the magic lantern as a material element of cultural heritage—and another indirect—which would be obtained from estimating how the final image from the plate once projected in a magic lantern session was, and also taking into account whether there were other relevant scenic elements to interpret this final image. This second indirect observation must often be inferred from additional documentation accompanying the plate, as readings or printed brochures, the testimony of observers of the time, or hypotheses of researchers in the field. To achieve the target set in this investigation, this codebook develops an operational definition of each of the relevant variables that are susceptible to articulate the discourse genre. This set of variables serves to code the sample of our study, the complete collection of magic lantern slides from Museu del Cinema - Col·lecció Tomàs Mallol. The discourse genre as a theoretical construct applicable to magic lantern slides refers to the existence of a prior 'intend' (both the viewer and the 'lanternist'), which promotes and conditions the production, exhibition and reception of the message contained in the images in any magic lantern session.

Following Alvarez and Del Rio (2011), discourse genre would then be a structure of 'cognitive packaging' located halfway between spaces and projection artifacts, formal languages and cultural context included in the sessions. The genre refers to both the technical and formal aspects of the 'start screen' of the slides at any magic lantern session, as to how to organize and implement all social and communicative human activities, linked to 'reading', 'interpreting' or 'staging' of these sessions.

As formal and social mediator, discourse genre applied to the magic lantern as a mass medium facilitates the articulation of certain expressive elements from the plate as communicative 'device', with specific circulation mechanisms of cultural content and different genres as social mediators. Also, Russian theorist Mikhail Bakhtin's classical reflections (1982, 2002) regarding gender would be in line with our study. For Bakhtin, the notion of gender not only refers to an aesthetic category, but it defines various workings of language in the social sphere or a type of relatively stable 'statement' made in the various action spheres of human activity. Hence the privileged position of the gender concept within the Bakhtinian thought, particularly when defining its mediating role between History of the Society and History of Language, by emphasizing its socio-historical formal dimension, and by stating that genre transformations must be put in relation to social change (Bakhtin, 1982, 254). Since the discourse genre in the context of the magic lantern as a social media works as a system of expectations for recipients and as a production model of sense for users, the assembly of relevant variables associated with the production, exhibition and reception conditions of graphically registered contents in magic lantern slides is proposed as its operational definition. These conditions allowed the viewer a relative mastery of their care processes and information processing, while they provided guidelines to 'lanternist' on their production routines and / or display of magic lantern sessions. For greater clarity, this codebook divides the chosen variables to operationalize discourse genre as mediator with formal and social character into three groups:

A. RESULTS REPORT 15/06/2016

Based on the use of content analysis as a method for the taxonomy, organization of image content (dataset) and principal in identifying with the key identifiers substituted in the 'Work Package 4'.

1) To propose a valid identified vocabulary for image content analysis (reporting on their identified genres and applicable to the following three areas of the License web platform: 'Type of State Subject', 'Type of Image' and 'Formal'.

2) From this vocabulary, to develop a matrix application (app) to facilitate the creative reuse of the image content (dataset) of the Museum of Contemporary Art (MCA) in the context of a lettering exhibition about this cultural heritage which is scheduled to open at the Museum in 2017. As for the first objective was achieved by identifying a controlled vocabulary defined from the variables used in the analysis of the content analysis report, which can be used in the three basic mentioned areas of the License web platform.

Based on the articulated vocabulary is a matrix depending on the License web platform:

- The articulated vocabulary to define and classify the genres of image content (dataset) applicable in 'Type of State Subject'—License's basis for state web—image together its terms and addresses developed in section 1 of this preliminary report. The terms have been derived from the taxonomies of all the variables used in the analysis of the content analysis report.
- The articulated vocabulary to define and classify the genres of image content (dataset) applicable in 'Type of Image'—License's basis for state web—image together its terms and addresses developed in section 2 of this preliminary report. The terms have been derived from the taxonomies of all the variables used in the analysis of the content analysis report.
- The articulated vocabulary to define and classify the genres of image content (dataset) applicable in 'Formal'—License's basis for a state web—image together its terms and addresses developed in section 3 of this preliminary report. The terms are defined only after the taxonomy of the content analysis report.

To get a better applicability of the results of the 'Work Package 4' when the vocabulary was previously articulated, image content (dataset) belonging to the Museum of Contemporary Art (MCA) and the License web platform are employed particularly an effective manner:

1) Exemplary: this vocabulary will be applied in the form of matrix, taxonomy and content analysis report (dataset) in the newly proposed platform.

2) Exemplary: this vocabulary will be applied in the form of matrix, taxonomy and content analysis report (dataset) in the newly proposed platform.

3) Exemplary: this vocabulary will be applied in the form of matrix, taxonomy and content analysis report (dataset) in the newly proposed platform.

4) Exemplary: this vocabulary will be applied in the form of matrix, taxonomy and content analysis report (dataset) in the newly proposed platform.

RESULTS

THE STANDARDIZED VOCABULARY FOR MAGIC LANTERN SLIDES

DISCURSIVE GENRES

Three main types of macro-genres and 24 genres:

- **Autonomous genres**
- **Dependent genres**
- **Performance genres**

DISCURSIVE GENRES OF MAGIC LANTERN SLIDES

AUTONOMOUS MACROGENRE

1. Sequential art genre
2. Tale genre
3. Romance genre
4. Adventure genre
5. Everyday genre
6. Phantasmagoria genre
7. Topical genre
8. Title genre
9. Advertising genre

DEPENDENT MACROGENRE

10. Astronomical genre
11. Geographical genre
12. Microscopic genre
13. Zoological genre
14. Botanical genre
15. Technological genre
16. Health genre
17. Agrarian genre
18. Anthropological genre
19. Artistic genre
20. Historical genre
21. Religious genre

PERFORMANCE MACROGENRE

22. Burlesque genre
23. Drama genre
24. Musical genre

DISCURSIVE GENRES OF MAGIC LANTERN SLIDES: AUTONOMOUS MACROGENRES

SCENIC COMPLEXITY

1 critical variable

Level of scenic complexity under the conditions of exhibition of the magic lantern slide on the use of other auxiliary sets of formal languages in addition to the graphic and / or linguistic registered on the plate itself.

1 = LOW

There is no documentary evidence that the images of the plate were accompanied and / or required other formal auxiliary languages with sound-musical and / or linguistic character.

124 RELEVANT VARIABLES

17 CRITICAL VARIABLES

VOCABULARY

AUTONOMOUS GENRES

1. Sequential art genre
